Disciplinary Literacy and Explicit Vocabulary

Teaching Jun 26 2022 Firmly rooted in research

evidence of what works within the classroom for

our most disadvantaged students, Disciplinary

Literacy and Explicit Vocabulary Teaching offers

teachers and school leaders practical ways in

which those students who are behind in their

literacy capabilities can make excellent

progress. Building on the work of Geoff Barton

in his influential book Don't Call it Literacy,

Kathrine Mortimore outlines the unique literacy

challenges posed by specific subject areas for

those with weaker literacy skills, and more

importantly how these challenges can be

addressed and overcome. A student's GCSE

results are vital in giving them the choices they

deserve in order to go on to the next stage of

their academic careers. This book draws on the

success stories of schools and subjects that have made significant improvements in the outcomes of the children they teach, regardless of their starting points. From the inevitable success of Michaela Community school, to the gains made by the English department at Torquay Academy and the rapid reading improvements at Henley Bank, this book draws on both whole school initiatives and subject-specific strategies which have had proven success. This book places a wide and balanced knowledge-rich curriculum at the centre of any school improvement strategy designed to improve literacy, and illustrates the role that all subjects must combine to play in building the vital background knowledge and vocabulary that young people need in order to read independently. This curriculum must then be delivered using those teaching methods that have had the greatest impact on disadvantaged learners, and this book sets out how the methodology of direct and explicit instruction can be adopted within each subject area.

Alongside this is a useful summary of staff development and inset which offers practical ways in which teachers' adoption of these effective strategies can be facilitated. There are also useful sections on creating a whole school dictionary of essential vocabulary, creating a culture of reading and writing, and also those key literacy barriers experienced by those students with some of the most common special educational needs.

GRE Math Tests Jul 24 2019 Twenty-three GRE Math Tests! The GRE math section is not easy. There is no quick fix that will allow you to "beat" the section. But GRE math is very learnable. If you study hard and master the techniques in this book, your math score will improve-- significantly! The GRE cannot be "beaten." But it can be mastered--through hard work, analytical thought, and by training yourself to think like a test writer. Many of the problems in this book are designed to prompt you to think like a test writer. For example, you will find "Duals." These are pairs of similar problems in which only one property is different. They illustrate the process of creating GRE questions. * If your target is a 700+ score, this is the book!

Teaching Online Handbook Oct 31 2022

Classroom teachers are increasingly expected to teach online - creating content area courses from scratch with little support or training. But high-quality, researched-based online teaching has its own particular set of skills and expectations, and most resources are directed at college-level instructors. This no-nonsense handbook is for that busy classroom teacher, with clear techniques for planning, instruction, and assessment, as well as sections on teaching

students with diverse needs and exceptionalities. Based on the author's real-life experiences as an online teacher, there are multiple examples including sample assignments across content areas, rubrics for grading, and sample scripts for parent contact as well as tips to reduce instructor workload and conduct successful live instruction.

Money, Banking, and the Economy Oct 26 2019
Money, Banking, and the Economy: A Monetarist View presents a systematic "monetarist" approach to money, banking, and the economy. The monetarist approach is a blend of the pre-Keynesian quantity theory, the tradition represented by D. H. Robertson, and the modern monetarist school, represented by Milton Friedman and his followers. A systematic development of a model of nominal income, based upon the Cambridge equation and the loanable funds theory of interest, is presented. This model is applied to the business cycle; inflation and stagflation; balance of payments and foreign exchange rates; and monetary and fiscal policy theories. Comprised of 20 chapters, this book begins with an introduction to the concept of money and its functions and how it contributes to economic instability. The discussion then turns to the new and old definitions of the things that serve as money, the structure and institutions of financial markets and financial instruments; banks, banking markets, and banking regulations; and the money supply process. Subsequent chapters explore the structure and functions of the Federal Reserve System; the problem of implementing monetary policy; the Clower-Leijonhufvud idea of Say's Principle; the quantity theory of money as described by the equation of exchange or the Cambridge equation; and the connection between money and business cycles. The book concludes by describing a monetarist-public choice perspective on the efficacy of monetary and fiscal policies. This monograph will be of value to undergraduate students and economists.
